

Product Sheet

Rovere Test 5

The collection “Naturalizzati” is the result of the incessant search path that the company has undertaken since its birth to provide a product with an absolute quality and aesthetic value. A treatment with a cycle of 6 coats of water-based wax and UV oil maintains the naturalness of the appearance of the wooden surface conferring surprising characteristics of impermeability and thus absolute resistance from the aggression of agents that may cause stains. From this complex process is born a wooden floor safe in all conditions, with a natural look and a soft and velvety touch.

Range: Naturalizzati

Name: Rovere Test 5 (Madellen)

Size: 15(4) x190x2000mm

Finish: Brushed

Treatment: Pre treated with 6 coats of water-based wax and UV oil.

Features:

It has taken more than 25 years of company history to reach this unique finish and colour. Currently the market does not have a competitor in this colour and finish.

The multiple layers of varnish, and subsequent UV lamp treatment after each layer creates a very durable treatment with a very high abrasion resistance. As a result no further treatment, oiling or sanding is required for the life of the product. Scratches do not affect the quality of the treatment and will only stretch the finish but not break the seal. However deep scratches or heavy sharp objects that damage the timber, we suggest replacing the particular piece.

Maintenance:

We suggest regular cleaning with a slightly damp cloth and neutral detergent, non-foaming, non-aggressive cleaners.

No need to re-sand the timber again for the life of it, unless you want to change the colour.
